Environ® DF Technology

“A non-invasive way to achieve healthy, youthful skin without resorting to surgery”

We are proud to offer Environ’s Active Vitamin Facial Treatment where we use the **lonzyme DF Device**, which is at the forefront of scientific skin care. The device introduces the use of **Pulsed Iontophoresis**- the use of a specifically pulsed electrical current to facilitate penetration of vitamins into the cells, and **Low Frequency Sonophoresis**-the use of sound waves to transport vitamin molecules through the skin.

The **lonzyme DF Device** has been specifically designed for Environ skin care treatments and it is considered the most effective technology in the world today for enhancing the penetration of high doses of vitamins and serums into the skin.

Specific Environ® products that we use in some of our treatments are high in Vitamins A and C plus additional growth factors, which are essential for the maintenance of a healthy and youthful skin. However, the skin has a natural waterproof barrier that hinders the penetration of vitamins. Hence, this revolutionary system overcomes this resistance and enhances the penetration of vitamins contained in the Environ® professional skin care products, with the combination of 2 highly sophisticated methods – **Pulsed Iontophoresis** and **Low Frequency Sonophoresis**.

The treatments are designed to stimulate maximum thickening of the skin, normalization and improvements of collagen and elastin, better control of pigmentation production, restoration of normal skin blood flow and proper oxygenation of the skin.

The treatments are designed to aid: Anti-ageing and Sun damaged skin, Pigmentation, Acne, Rosacea, Dry & Sensitive skin, Scarring, maintenance of healthy skin.

How often?

For optimum results a series of at least 6 DF treatments is recommended. However, depending on the age and the problem that is treated, more treatments can be encouraged. The treatments are preferably done 2 weeks apart. The use of Environ® skincare for home is essential, as otherwise the client won’t be able to receive high doses of vitamins in the skin. Each client is different and a consultation is done prior to treatment, where a treatment plan with the DF Technology is devised to allow the optimum benefits.

The DF lonzyme Technology is suitable for all skin types and can be incorporated into your regular facial treatment or delivered as a targeted, Active Vitamin Facial Treatment.

Treatments are designed to:

- Minimise lines and wrinkles (including upper lip, around the eyes, neck, jowls)
- Normalize and improve collagen and elastin
- Diminish pigmentation

- Increase healing of acne
- Stimulate thickening of the skin
- Restore elasticity and tone
- Deliver a healthier, more vibrant skin
- Restore normal blood flow and oxygenation to the skin
- Reduce stretch marks
- Reduce chicken pox and acne scars

For an even more enhanced treatment, we encourage you to purchase the Cosmetic Needling (Roll-Cit) to dramatically increase the effectiveness of Environ® skin care products, allowing improved penetration of vitamins into the active layers of the skin. 'Micro-needles' puncture the horny layers of the epidermis, which is the main obstruction to penetration of active ingredients. This results in their passage to attain depths in the skin about 10,000 time more than by simply applying the products topically. The higher the levels of vitamin A and C that can penetrate into the horny layers of the epidermis, the more collagen can be made. This Cosmetic-Needling (Roll-Cit) can be done at home, but clients can also bring this along to the facial, where it will be done on the client prior to using the DF machine guaranteeing even better penetration of vitamins.

Treatments

FACIALS

Esse Booster

30 min

100% Organic Skin Care Facial- deep cleansing, exfoliating, facial massage, pressure pointing, moisturize

Healing Earth Anti -Ageing

45 min

Cleanse, deep exfoliating, Ozone steam, Anti-Ageing facial mask, facial massage, moisturize, Anti-ageing Serum (choice of hand or foot massage included)
