

FATFREEZING TREATMENTS

FREEZE YOUR FAT AWAY

turn your back on stubborn fat with this
non-invasive, pain free treatment

SHAPE & BEAUTY
THE FAT FREEZE CLINIC

FATFREEZING

The FatFreezing procedure is a **safe, FDA-cleared, non-surgical fat reduction treatment** that uses controlled cooling to eliminate stubborn fat that resists all efforts through diet and exercise. The results are proven, and noticeable, so you'll look great from every angle.

HOW DOES FATFREEZING WORK?

Freeze away fat? It comes down to science. Fat cells freeze at higher temperatures than surrounding tissues. FatFreezing technology enables us to precisely target fat cells beneath the skin, and cool them to temperatures that trigger their natural death. This process, known as FatFreezing, results in the treated fat cells becoming crystallized (frozen), and actually die. Because the fats crystallize faster than normal cells, there is no damage to skin, nerves or other surrounding tissue.

Over time as the treated fat cells shrink and die, your body naturally metabolizes them, eliminating these dead cells, and leaving a more sculpted you.

Unlike with diet or exercise where the fat cells are reduced in size, with FatFreezing, once the treated fat cells are gone, they're gone for good.

With each session you are able to decrease the number of treated fat cells by about 20% to 26%. Each additional treatment further enhances your results, ridding you of an additional 20% to 26% of the treated fat cells per session. With FatFreezing it's easy to sit back, relax and reduce that stubborn fat.

HOW FAT CELLS ARE FROZEN

1. Despite diet and exercise, fat cells accumulate in the body and can be very tough to get rid of.
2. FatFreezing technology uses controlled cooling (Cryolipolysis) to target, freeze, and kill only these fat cells.
3. In the weeks to follow, these fat cells are naturally eliminated from the body.
4. FatFreezing results are long-term, as treated fat cells are gone for good.

FATFREEZING BENEFITS

Natural-looking results

After one session, the treated area will gradually appear smoother and more toned over the course of the following six months. The majority of the frozen fat cells will naturally work their way out of your body in the first two months, but many see some fat reduction after just four weeks!

FDA CLEARED

FatFreezing uses controlled cooling to target and freeze away fat cells. The technology is FDA cleared and is safe on your body – but tough on stubborn fat.

Convenient and comfortable

A session lasts only about 1 hour, making it quite possibly one of the best-used hours of your life. Many report feeling a burst of cold air, followed by dull pressure. During their session, some patients read, get work done - or even sleep!
