CONTRACTING

COMPANY INTRODUCTION

About Us:

TBR is a family run contracting company with our roots in Port Elizabeth, Eastern Cape, established in 1989. We however, operate nationally by establishing sites where necessary. Having a passion for excellence, service and exceptional quality have ensured our continued growth in all the markets we serve.

A dedicated team of highly specialised and experienced personnel make for a world class interaction with customers and an unsurpassed product quality.

TBR will assess the works to be undertaken, recommend professional, reputable products to suite each unique contract, adding maximum value to your spend.

Our Vision:

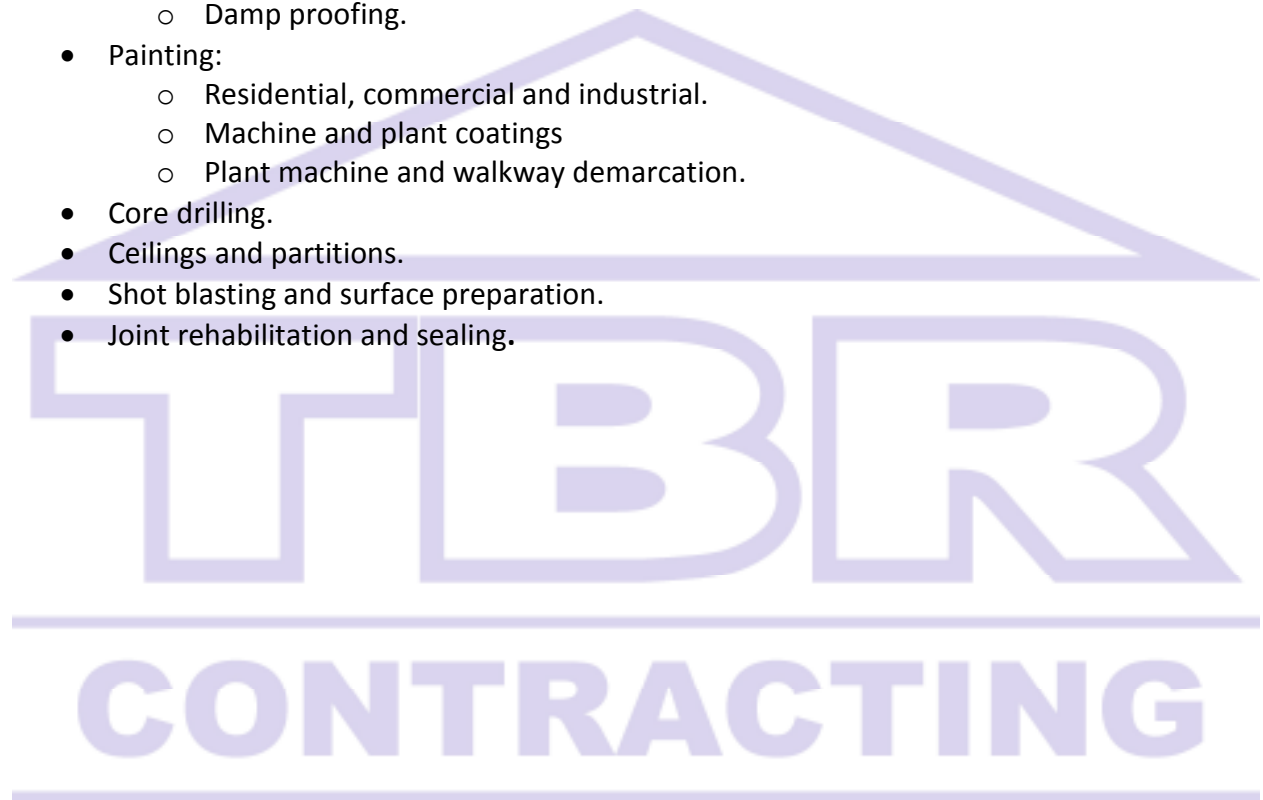

- To become the leading facility management and maintenance company in our region.
- To empower our staff by providing them with skills and training, which they can use to uplift themselves from poverty.

Our Mission:

- To establish and maintain long-term working relationships with our clients.
- To provide a comprehensive, professional and efficient service to our clients.
- To walk alongside our clients as they methodically attain their maintenance needs.
- To continuously upgrade, train and retain our staff.

 - Residential, commercial and industrial.
 - Machine and plant coatings
 - Plant machine and walkway demarcation.
- Core drilling.
- Ceilings and partitions.
- Shot blasting and surface preparation.
- Joint rehabilitation and sealing.

Epoxy and Polyurethane floor coatings

FLOOR COATINGS

WHY:

Floor coatings are generally installed to protect, promote good hygiene and enhance the look of concrete floors.

Concrete will absorb any liquids spilled on the floor which include acids and oils. Acids (including lactic acid in milk), fruit and vegetable juices can erode concrete and severely damage the surface.

Mechanical damage from heavy equipment, tools and parts also damage concrete.

Bacteria and algae also grow on concrete and can pose a potential health risk.

Typical floor coating users include: Butcheries; Bakeries; Dairies; Factories; Food processing plants; Supermarkets; General retail and your garage floor.

HOW:

TBR will conduct a site inspection and evaluate the concrete to be coated and recommend the most appropriate products for installation. We are approved applicators to all suppliers in South Africa and have access to all products available. We are not tied to one supplier and this ensures an unbiased product selection for the specific installation and long term customer satisfaction.

PREPARATION:

As the old saying goes "it is all in the preparation"

TBR has skilled operators, modern equipment including a walk behind **Shot blaster** to ensure the highest degree of preparation to meet stringent material manufactures specifications.

Shot blasting is the preferred method of surface preparation of most material manufactures.

APPLICATION:

We have highly trained and experienced application crews, following all application guidelines to produce a fit for purpose, aesthetically appealing finished product.

Concrete Repair

Concrete is subject to mechanical, structural and atmospheric abuse and degradation. No matter the state of your concrete structure, TBR can repair and rehabilitate to a “good as new” condition.

We have access to and use specialist repair motors to complement any application, time frame and finish required.

We specialise in the following concrete repair disciplines:

- Cracked or crumbling concrete
- Emergency quick drying repairs
- Structural concrete
- Construction and movement joints

Waterproofing:

From fixing a basic roof leak to waterproofing a large parking deck, TBR has the skills, equipment and trained installation teams to solve any waterproofing dilemma.

TBR undertakes large new installation works and we are trained, experienced and equipped to apply:

- “Torch on systems”
- Cementitious systems
- Liquid bituminous systems
- Damp proofing and rising damp.

Core Drilling:

TBR is fully equipped to undertake core’s from 20mm to 300mm and up to 450mm thick. Our Hilti core drill simply EATS concrete!

Ceilings and Partitions (Dry Walling)

TBR has been erecting ceilings and partitions in factories, offices and shopping centers since 2001. Our experienced team of installers will make for an effortless, neat and professional installation.

We supply a total turnkey solution including wooden or aluminum windows and doors. Our painting division will expertly decorate your new structure in your desired colours.

TBR will also renovate extend or amend your current installations.

Painting:

Painting is all about preparation!

Bad preparation accounts for the majority of all paint failure. Bad product choice accounts for the remainder. This all points to the contractor either wanting maximum profit, having a total lack of knowledge or total disinterest in the finished product and consequent failure of the paint work.

Choosing a trusted experienced contractor is vital in ensuring thorough preparation, correct product choice and a long lasting beautiful finish.

TBR will visit your site and do a complete site evaluation including moisture checks.

We will provide a specification using specialist paint products backed by manufacturer's warranties.

TBR has a dedicated team of painters experienced in thorough surface preparation to ensure you receive the maximum life from your painting application.

TBR undertakes painting to domestic, commercial and industrial clients.

We do painting to:

- New Buildings
- Roofs
- Renovations
- Demarcation lines to factories
- Machine and major equipment
- Specialist coating to metal surfaces

Shot Blasting and Surface preparation:

TBR have specialized surface preparation equipment for concrete and large steel surface preparation and cleaning.

Our trained operators will ensure your large steel or concrete surfaces are prepared to industry standards quickly and effortlessly.

Our preparation to steel includes:

- Petroleum storage tanks
- Ships decks
- Any large steel or concrete surface

Joint sealing:

Expansion or construction joints require regular maintenance and resealing to prevent joint nosing damage and ingress of liquids!

TBR undertakes full joint rehabilitation and sealing to existing joints and as well as new joints in the initial construction phase.
